

# Instructions on how to use cards for printing /photocopying

---

Print your job as usual.

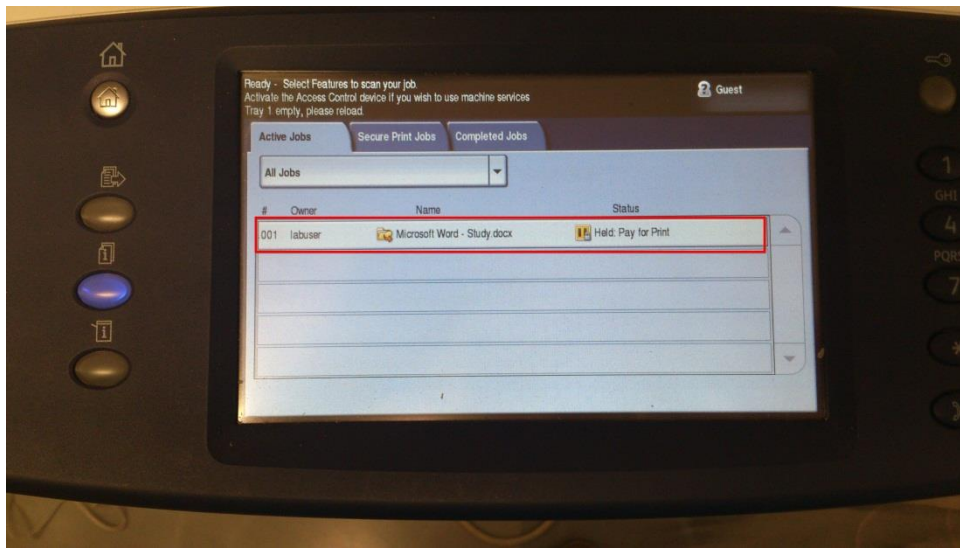

Go to the printer and insert your card in the card reader.

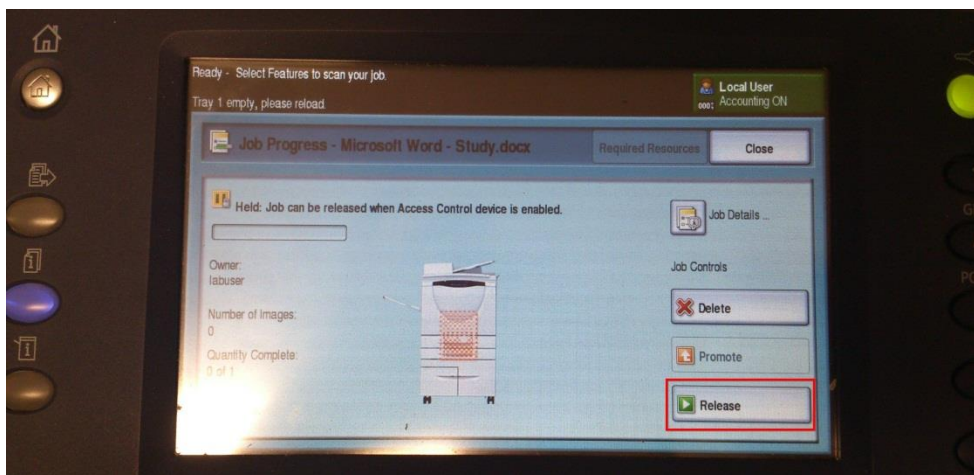

You will see your current printing credits on the screen of the reader (i.e. the number of pages you can print with this card).

On the printer screen you will see a list of jobs waiting to be printed. Locate your job using the file name and tap on the respective row to proceed.

Tap on the *Release* button to print the selected job.

The pages contained in the file you just printed are automatically subtracted from your card's balance. Remove the card by pressing the green arrow button on the reader.

If you wish to photocopy, you need to insert the same card before sending your job.
